# ○ JMB FAMILY COUNCIL EDUCATION & FAMILY HISTORY COMMITTEES

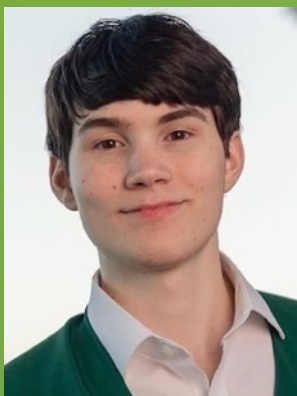

- ❖ The Education Award was created in 2015
- ❖ Established in recognition of the importance placed on an advanced education by Jules M. Burguières, Sr.
- ❖ A legacy passed on to all his children
- ❖ An award the Education & Family History Committee as well as the Family Council has chosen to preserve and support

# JMB FAMILY COUNCIL EDUCATION & FAMILY HISTORY COMMITTEES CRITERIA

- ❖ A member of the Family Assembly, in good standing, as defined in the Constitution
- ❖ Studies that advance one's education beyond their Senior year of High School
- ❖ Completion of the Education Award Application which describes how the Award will be used
- ❖ One letter of recommendation, and two references
- ❖ Report is given at the next Family Assembly Annual Meeting, or if unable to attend, a written report

# THE JMB FAMILY TREE & SCROLL

## Descendants of Eugene Denis Burguières

- ❖ The JMB Family Council has gathered information regarding births and deaths with dates for each branch for the Family Tree and a Printable Scroll.
- ❖ This was a huge endeavor as our family is quite large, and the last scroll was produced in 2012.
- ❖ We appreciate your assistance and cooperation in this historical document for future generations.
- ❖ We ask you keep us up-to-date with new information, or any necessary edits, too.

# ACH DISTRIBUTION & PERSONAL UPDATES

- ❖ Have you signed up for ACH Distributions from JMB?
- ❖ Contact Jennifer Chaisson  
[Jennifer@jmbcompanies.com](mailto:Jennifer@jmbcompanies.com).
- ❖ Jennifer needs any changes to bank accounts for your ACH Distributions.
- ❖ Remember, you receive your distribution earlier and safer than via checks in the mail.
- ❖ If you change your email or physical address, be sure Jennifer has the updated info, also.

# JMB FAMILY COUNCIL NOMINATIONS

Leila Bristow Hines  
Ernest Branch

Holly Charpentier Vogel  
Member At-Large  
Henry Branch

# CEMETERY & STATUE RESTORATION PROJECTS COMMITTEE

Father Randy Courville has confirmed that the St. Helen's Church will be demolished in the, near, future.

The statue of the Sacred Heart of Jesus will remain on the grounds at this time, and all other sacred items will be transferred to the St. Francis Chapel in Cypremort Point.

THE SACRED HEART OF JESUS STATUE  
IS LOCATED ON THE CHURCH GROUNDS  
OF ST. HELEN'S CATHOLIC CHURCH

# NATIONAL EUCHARISTIC PILGRIMAGE

The National Eucharistic Pilgrimage is a, truly, unique initiative. This is something **NEW**—a beautiful fusion of the journey **TO** Jesus and the journey **WITH** Jesus. What’s more, it is an adventure that all Catholics can do together, either by interior disposition or by physical accompaniment.

Beginning  
May 17, 2024  
thru  
July 16, 2024

## ABOUT THE INTERCESSOR

This route is named for St. Juan Diego, whose vision of Our Lady has had a massive impact on the spiritual character of North America. St. Juan Diego had a great devotion to the Eucharist and made his own little pilgrimage every day, rising before dawn and walking 15 miles to daily Mass. Today we join him in asking Our Lady to lead America to a greater love for her Son in the Eucharist.

**St. Juan Diego, pray for us!**

## Weekend Stops

- BROWNSVILLE, TX** ————— May 17–19, 2024
- CORPUS CHRISTI, TX** ————— May 24–26, 2024
- HOUSTON, TX** ————— May 31–June 2, 2024
- NEW ORLEANS, LA** ————— June 7–9, 2024
- MOBILE, AL** ————— June 14–16, 2024
- ATLANTA, GA** ————— June 21–23, 2024
- NASHVILLE, TN** ————— June 28–30, 2024
- LOUISVILLE, KY** ————— July 5–7, 2024
- OUTSIDE INDIANAPOLIS** ————— July 12–14, 2024
- INDIANAPOLIS, IN** ————— July 16, 2024

### CORPUS CHRISTI

We will have a special Mass in this Texas city named for the Body of Christ.

### SHRINE OF THE MOST BLESSED SACRAMENT

The Pilgrimage will visit this beautiful shrine nestled in the countryside of northern Alabama.

### ST. LOUIS CATHEDRAL

We will attend Mass the oldest cathedral in North America, followed by a reverent Eucharistic procession.

### LOUISVILLE

Pilgrims will pass through the largest city in Kentucky, known for its deeply Catholic history.

# THE FAMILY HISTORY COMMITTEE

## "THE BIG HOUSE" LOUISA PLANTATION

Denis P.J. Burguières designed and built, "The Big House," at Cypremort, around 1910, using the virgin cypress and pine from the family's timberlands.

In the late 1970s, due to the lack of occupation, disrepair, vandalism and liability, Edward Edmond Burguières had Louisa torn down.

DENIS P.J. BURGUIÈRES  
1874-1936

Photo ca. 1915

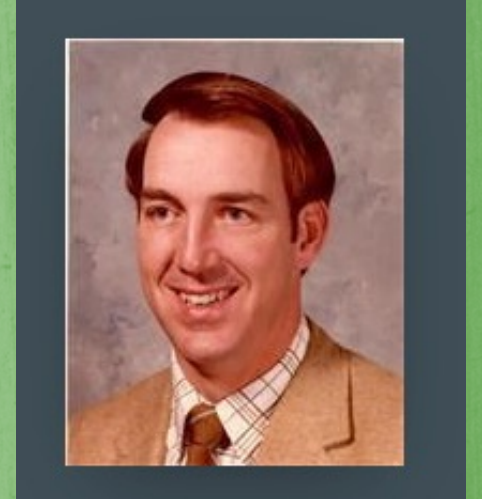

# ALBERT N. BURGUIÈRES RECALLS...

Written by: Donna  
McGee Onebane

"...It was a huge, two-story white house built with virgin cypress, pine, and oak. The ceilings on the first floor were twelve feet high.

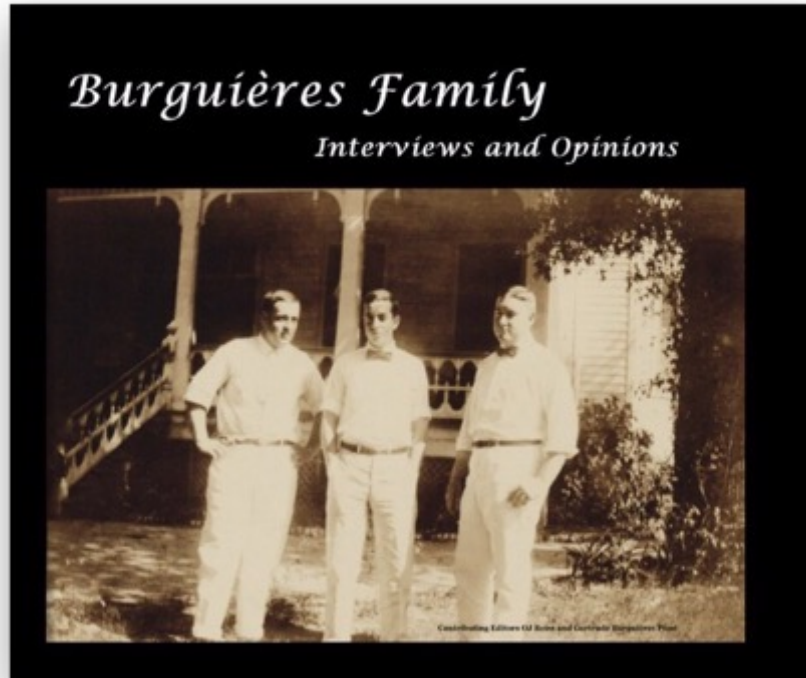

The first floor had a library/office, sitting/living room, and a huge dining room with a mounted tarpon fish over the fireplace mantel."

ALBERT NAYLOR  
BURGUIÈRES

1942-2021

# STORIES TOLD

- Written by: O.J. Reiss and Gertrude Burguières Pfof

President of the Dulac Cypress and Shingle Company,

President of the Cypremort Sugar Factory (which he designed),

Secretary of the Planters' Company, and

A Stockholder in the Houma Cypress Company.

In 1899, he received a U.S. Patent for a "Sugarcane Scraper," and in 1930, for "Method of Ripening Sugar Cane."

Denis married Alice Broussard, daughter of Frank Broussard and Ernestine Patout Broussard, both from pioneer families of south Louisiana. They had 8 children.

Denis P. J. Burguières died in 1936 at the age of sixty-two, having served the family business for over thirty-five years.

DENIS P.J.  
BURGUIÈRES  
1874-1936

UNITED STATES PATENT OFFICE.

JOSEPH M. JUNCA AND DENIS P. J. BURGUIERES, OF LOUISIANA.

SUGAR-CANE SCRAPER.

SPECIFICATION forming part of Letters Patent No. 631,722, dated August 20, 1899.  
 Application filed June 12, 1898. Serial No. 193,916. (No model.)

To all whom it may concern:

Be it known that we, JOSEPH M. JUNCA and DENIS P. J. BURGUIERES, citizens of the United States, residing at Loria, in the parish of St. Mary's and State of Louisiana, have invented a new and useful Improvement in Sugar-Cane Scrapers, of which the following is a specification.

This invention is an improved machine for scraping sugar-cane—that is to say, for removing the surplus and compacted soil from the planted cane, as is commonly done in the most approved method of cane cultivation practiced in Louisiana.

The construction, combination, and operation of the machine are hereinafter set forth, reference being had to the accompanying drawings, in which—

Figure 1 is a perspective view of the complete machine. Figure 2 is a horizontal section on line 2-2 of Fig. 1. Figure 3 is a vertical section on line 3-3 of Fig. 1. Figure 4 is a vertical section on line 4-4 of Fig. 2. Figure 5 is a vertical section on line 5-5 of Fig. 2. Figure 6 is a transverse section on line 6-6 of Fig. 2. Figures 7, 8, and 9 are vertical sections of the soil, illustrating the approved method of cultivating sugar-cane.

A A' indicate two parallel wooden runners which are shod with strap iron or steel. These runners are rigidly connected and held duly spaced apart chiefly by means of two metal arches B B', arranged at their respective ends. The rear one, B', supports the driver's seat and the front one, B, supports draft-rods C, to which the team is attached (in practice) and which further connect and brace the runners A A'.

The cane cutting, scraping, and shaving apparatus, together with the means for adjusting the same higher or lower, is arranged just forward of the middle of the runners A A'. The knife, cutter, or scraper D is arranged flat and nearly horizontal, and the moldboard E cuts thereon and is curved upward and rearward. The upward extension F of the moldboard is arranged at an angle to the latter, E. Both the knife D and moldboard E are inclined forward or placed oblique to the runners A A', so as to enable the knife to make a draw cut and to cause the soil, stubble, and trash taken up by the knife to be discharged at one side of the machine.

A considerable portion of the runner A is cut out, as shown at a, Fig. 1, to accommodate the cutter and apparatus connected with it, while the other runner A' is also cut out at two places a', Fig. 4, and to a less depth. The knife or cutter D is rigidly attached by means of a series of flat tapered bars F (see Figs. 2 and 3) to two transverse angular rods that pass through the rear ends of said bars F and are arranged horizontally. These bars are rigidly connected and spaced apart by means of a rod G (see Fig. 2), which is arranged intermediately of the rods G. The ends of said rods G enter holes in pivoted blocks H, arranged adjustably on vertical standards or uprights I I', that are fixed to the respective runners A A'. That is to say, three uprights, consisting of stout iron rods, are fixed on each runner in a plane parallel thereto and spaced apart, as shown. The upper ends of the standards are connected by curved braces 2, which extend to the front and rear and are bolted to the runners. A transverse tie-bar K, Fig. 1, further connects and braces the standards.

Each series of blocks I and I' is pivoted upon a horizontal rod forming part of the respective hangers L L', whose upper portion is in the form of an inverted stirrup and connected by a pivoted link M or M' with the respective hand-levers N N'. The latter are pivoted on the curved braces 2, as shown in Fig. 1. It will be seen that three of the sets of blocks I and I' are pivoted in the respective hangers L L' and I'. It is apparent that each set of blocks thus pivoted is adapted to rock independently, and thereby each hanger L or L' may be raised or lowered independently of the other by its connecting-lever N or N'. Hence the knife D and moldboard E may be raised or lowered at either end without like movement of the other end. This obviously permits the horizontal angle of the knife and moldboard to be adjusted to any degree required for cutting and scraping the soil from the cane at an inclination to the furrow.

From inspection of Figs. 1, 3, and 5 it will be noted that the rods G pass through the lower portions of blocks H and through the

upper portion of blocks H, and hence the knife is held normally inclined horizontally. This inclination is further provided for by the difference of depth to which the runners are cut out at a' or to accommodate the respective sets of blocks H and H'. A plate g is attached to and connects the rods G at one end and a similar plate g' at the other end.

As a means for guiding the hangers L and L' vertically we employ the rods O O', which slide in guides P, bolted to the braces 2. The said rods O O' are rigidly secured to the respective hangers L L' by means of screw-nuts. Having now sufficiently described the construction of our machine, we will briefly indicate its practical application in the cultivation of cane.

According to the method of cane cultivation generally adopted in the State of Louisiana the ridge in which the cane is planted is first barred off on each side by means of a plow, so that the ridge left standing has straight or vertical parallel sides. The earth thus removed from the sides of the ridge is thrown laterally into the furrow, where it remains. The ridge is now ready to be scraped. By the old method this is done entirely by manual labor, the laborer using a hoe, by means of which he cut away the top of the ridge, so that it assumed the form shown in Fig. 3. In using our invention the machine above described is drawn along the ridge and in its first operation removes one side or edge thereof, as shown in Fig. 7, and when drawn back over the said ridge it removes the opposite or corresponding edge, as shown in Fig. 8, and then the ridge is caused to present the oblique angle in cross-section which is shown in Fig. 5. This operation removes the compacted and surplus depth of soil, so that the cane becomes more readily affected by the heat of the sun, thus causing it to sprout out quickly.

Having thus described our invention, what we claim, and desire to secure by Letters Patent, is—

1. The combination with runners having cut-out portions or spaces which differ in depth in the respective runners, of a knife or scraper and moldboard which are normally inclined to both the horizontal and vertical as well as rearward, substantially as shown and described.

2. The combination with runners, of a knife or cutter, transverse rods supporting the lat-

ter, pivoted or hinged supports for each end of the said bars, and means for adjusting the knife vertically at each end, independently of the other, substantially as shown and described.

3. The combination with runners, of a knife or cutter, transverse rods supporting the latter, hangers arranged on each side, blocks pivoted thereon and receiving the ends of the aforesaid rods, vertical guides for said hangers, and levers for adjusting the hangers higher or lower, for the purpose of varying the position of the knife with relation to the ground surface, substantially as shown and described.

4. The combination, with runners or other form of support adapted to travel in the furrow, of a knife or cutter arranged transversely, bars for supporting the same, devices with which the ends of said bars are connected, vertical guides upon which said devices are adapted to slide, and pivoted hand-levers which are loosely connected with said devices, for the purpose of adjusting the knife vertically, substantially as shown and described.

5. The combination, with the runners, and a knife arranged transversely, of supporting-bars therefor, pivoted supports with which the ends of such bars are connected, a hanger on which the said supports are adapted to rock, vertical guides for such supports, and means for adjusting the latter higher or lower, and together or independently, substantially as shown and described.

6. The combination, with the runners, or other form of support, of a knife or scraper arranged transversely and one end thereof lying in a slot, or cut-out portion, of one of said runners, whereby it is normally lower than the opposite end, transverse bars supporting said knife or scraper, pivoted hangers in which these bars are held, the same being arranged in connection with means for vertical adjustment; vertical guides on which the hangers run; brackets or braces attached to the runners, and vertically-sliding guide-bars O and O', which work in suitable guides fixed on said braces, substantially as shown and described.

# THE OLD SUGAR MILL AT CYPREMORT SUGAR COMPANY

In 1977, the JMB  
Company closed the  
Cypremort Sugar Mill.

Photos by Cindy M. Cangioli  
Taken in the early, 1990s.

# THE CYPREMORT HOUSE

Through the years, the Cypremort House, as well as the 2 rows of beautiful oaks on the grounds, would weather many hurricanes and storms. Often, flooding, it would require the moving and preservation of valuable furniture pieces and collectables within the house and on the grounds.

Screened porches  
Trees trimmed

Above – The Cypremort House before being raised, and prior to any tree damage from hurricanes.

Photos by Cindy M. Cangiolsi  
Taken in the early, 1990s.

# THE CYPREMORT HOUSE

After Hurricanes Katrina and Rita in 2005, and Gustave and Ike in 2008, the Cypremort House was elevated 11 feet in 2009, to better protect it from storm surge and flooding.

As with all homes, the Cypremort House as well as the grounds are maintained and updated, routinely.

The latest improvements were completed in 2022. Colorful, pink azaleas were planted, an in-ground watering system was installed, concrete benches were placed, and several house repairs were made, too.
